EDUCATION

Queen's University

Graduated May 2026

B.A.Sc. Computer Engineering

Kingston, ON

- **Coursework:** Machine Learning & Deep Learning, Computer Vision, Algorithms, Data Structures, OOP, Networks, Operating Systems, Computer Architecture, Embedded Systems, Safety Critical Software

EXPERIENCE

Intern

August 2024 – August 2025

Direct Coil

Kingston, ON

- Utilized AutoCAD to draft 2D and 3D parts drawings for heat transfer equipment, including fluid coolers and condensers
- Learned product applications, manufacturing processes, and constraints while rotating through departments
- Contributed to revising design standards to ensure an optimized engineering process
- Managed urgent deadlines on time sensitive jobs, ensuring design quality remains up to standard
- Worked with manufacturing teams to resolve production challenges and ensure manufacturability of designed products
- Communicated directly with customers to develop solutions for design conflicts, balancing performance and practicality

PROJECTS

qRate | Microsoft Azure, GitHub Actions, React.js, Express.js, Node.js, MongoDB

May 2025 – Present

- Deployed a MERN website for a course/professor review platform, enabling students to share and explore ratings
- Set up CI/CD pipelines with GitHub Actions to automate testing and deployment, improving development speed
- Secured the platform with JWT auth, input validation, and profanity filters to ensure safe user engagement

WetMaps | Python, Scikit-learn, Google Earth Engine, GCP, Flask, React.js

October 2025 – April 2026

- Built an AI-driven geospatial classification system to map Canadian wetlands using AlphaEarth satellite embeddings
- Developed a cloud-based ML pipeline on Google Cloud for training, inference, and large GeoTIFF processing
- Automated deployment and testing using Docker and CI/CD to support reproducible experiments
- Implemented K-fold cross-validation, perturbation testing, and seed sensitivity analysis to ensure robustness and generalization

ReceiptMe | Gemini API, Google OAuth, React.js, Express.js, Node.js, MongoDB

June 2025

- Built a MERN expense tracker website, enabling users to upload receipts, track expenses, and gain budget insights
- Integrated Gemini AI API to generate personalized 30-day summaries with natural language insights from user data
- Implemented Google OAuth and demographic comparisons to benchmark spending by age, location, or income

TECHNICAL SKILLS

Languages: Python, Java, C/C++, JavaScript, TypeScript, HTML/CSS,

Frameworks: Angular, React.js, Node.js, Express.js

Cloud & DevOps Tools: Google Cloud Platform (GCP), GitHub Actions

AI/ML Tools: TensorFlow, Scikit-learn, OpenCV

Dev Tools: Postman, Git/GitHub/GitLab, Linux, Bash, Android Studio
